

How to get online with us

Download and install the client program that is appropriate to your computer. You will not need the server program, just the client program. <http://www.ventrilo.com/download.php>

After the client program has been installed you can use these quick step-by-step instructions for getting the program configured and connected into a server.

BE VERY CAREFUL NOT TO SKIP ANY STEPS. STEPS 3 AND 6 ARE CRITICAL! ALMOST ALWAYS WHEN SOMEONE IS HAVING A PROBLEM, THEY HAVE SKIPPED A STEP BECAUSE THEY THOUGHT THEY KNEW WHAT TO DO NEXT.

- 1) Start the ventrilo program. (You should have already installed it.)
- 2) Click on the "->" button (arrow button) that is next to the first pulldown window called "User Name".
- 3) Click the "New" button. This will open a small window where you can enter the logon name which is your real first name. If you don't use your real name, it will create some confusion.
- 4) Click the "OK" button.
- 5) Now that we are back to the main window click on the "->" button (arrow button) that is next to the pulldown window called "Server".
- 6) Click the "New" button. This will open a small window where you can enter a name that will describe the new server definition. Type in "All Nations Ministries". You don't need the quotes around it.
- 7) Click "OK".
- 8) Click on the "Hostname or IP" input box and type in Texas.MaxFrag.Net (Don't forget the two periods.)

9) Click on the "Port number" input box and type in 4113. The program will automatically display the default port number of 3784 but change this to 4113

10) Click on the "Password" input box and enter the password which is "fishersofmen" without the quotation marks.

11) Click "OK" to return to the Ventrilo main window.

12) Click "Connect" to establish a connection between you and the All Nations Ministries server. Do this in advance of the meeting a few days to make sure that you are set up properly. Don't wait to the last minute because we might not be available to help you.

13) If you hear tones in your headset or speaker and see a message that starts with "This is the All Nations..." you are logging on properly. Read that message and then close that screen. You should see your name below "All Nations".

14) To talk, press the Left Ctrl key. Let go of it when you are done talking. If you are the only one on line, you should hear some tones when you press the Left Ctrl key but there will be no one to answer you.

(We have noted that the Macintosh computers require an additional step. On the opening screen, click on "Setup" and a new screen will open. At the top of the screen on the left side, click on "Voice". It maybe already open. On the left side of the "Voice" screen, click (check mark) the three boxes on the left side of the screen at the top. Then click in the box that says "Hotkey" and type whatever key that you want to use to key the microphone. Then click on Okay at the bottom of the screen. You should be setup properly now.)

If you are still having trouble, then send an email to contact@allnationsmin.org a few days before the event. However, we are usually online a few minutes early to help people who are still having trouble. Maranatha!
